

Some straight talk about . . .

WireWorks™ Panel System

Total Control. Powerful Design. Unparalleled Flexibility.

Efficient and easy to install, the WireWorks panel system allows the customer to add or remove circuits, reconfigure a panel from monolithic to tiled to glass, from shorter to taller and move overheads without disrupting the existing workstation or existing cables. The WireWorks panel system can stand-alone or be integrated within any of the flexible KI

wall systems. Only WireWorks offers all these unparalleled benefits in one panel.

Total Control.

WireWorks supports the altering of panel heights or entire configurations without disturbing adjacent panels, electrical wiring or power and data cables.

Powerful Design.

The WireWorks panel system can be reconfigured from an acoustic tile to glass without disrupting the existing cables. A corner post can be changed to a 3-way or a 4-way with out disturbing the existing workstation.

Unparalleled Flexibility.

Power receptacles can be added to the WireWorks panel system at four different heights, thus allowing for sixteen different circuits. Cables are laid in without having to thread through frames. Off-module components permit immediate workstation change.
