

Laptop Garage. Control the use of classroom technology.

- Efficient flexibility
- Durable, sleek design
- Convenient security

**WORKING  
FOR  
YOU**

■ Now you see it (and use it) ... now you don't.

Laptop Garage™

The Laptop Garage enables a variety of KI tables to pull double duty in classrooms or training environments. When laptop technology access is needed, the Laptop Garage provides adequate space and cord management for laptops. And, KI tables can be powered with an 8-wire electrical system that provides power for multiple laptops. Need extra work space? Simply pull down the garage door for a flat writing surface. An optional keyless locking system can be programmed to simultaneously lock (and unlock) an entire room of Laptop Garages or individual units. The Laptop Garage allows any room to adapt to multiple uses and reduces the need for dedicated computer classrooms or labs.

### Pick your parking space.

Sometimes you envision creating a high-tech impression even in a multi-purpose classroom, or you may need a greater degree of functionality, or sometimes you're trying to stretch those purchasing dollars as far as they'll go. Designed for use on a variety of KI tables, the Laptop Garage provides a choice of aesthetics, function, and price point. It is designed for use on four different KI tables: InTandem® (shown), PowerComm®, DataLink®, and WorkZone®.

Functional, versatile and durable, the Laptop Garage really knows how to work a room ... without taking up much room. Its compact design leaves plenty of legroom and two sizes accommodate both standard and wide-screen laptops. Its versatility extends its life cycle and makes it very cost efficient. Its durability withstands the heavy use requirements of educational environments and we back it up with a 10-year warranty.

The Laptop Garage base lifts up for easy cleaning or retrieval of dropped items.

Electrical cords, data lines and locking cables feed through a convenient slot to wire management.

The compact design of the Laptop Garage keeps a discrete profile and won't interfere with knee space.

One click on the optional keyless locking remote locks down all Laptop Garages in a room. (Keyless locks can also be programmed for individual units.)
